

# Supplemental figure 2

**Supplemental figure 2.  $\text{NH}_4^+$  influx in the *hni* mutants.** Plants were grown on vertical agarose plates for seven days on HN medium supplemented with 1% sucrose. Influx was measured at the external concentration of 10 mM  $^{15}\text{NH}_4^+$ . Values are means of 8 replicates  $\pm$ SD. (\*) significant differences according t-test ( $p < 0.05$ ).
