HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Preface "Layer silicate materials and clays"

Journal:	<i>Philosophical Magazine & Philosophical Magazine Letters</i>
Manuscript ID:	TPHM-10-Apr-0133
Journal Selection:	Philosophical Magazine
Date Submitted by the Author:	13-Apr-2010
Complete List of Authors:	Valdre, G; University of Bologna, Department of Earth and Geo-Environmental Sciences
Keywords:	minerals, mineral surfaces, nanocomposites, nanostructured ceramics, silicates
Keywords (user supplied):	layer silicates, clays

PREFACE
“LAYER SILICATE MATERIALS AND CLAYS”

Clay science covers an extremely wide range of basic, applicative and interconnected subject areas. These subjects range from quantum-mechanical modeling of the structure of layer silicates to industrial applications of clays and the origin of life on Earth, or from clay-mineral relationships to terrestrial climate change, or from clay minerals to extraterrestrial environments, just to mention only a few.

But have we arrived at all the definitive answers on clays? Have we performed all the crucial observations? Have we adequately described the stability fields of clay minerals? Do we understand the chemical and physical properties of clays? Can we engineer these properties and exploit them for useful applications? Have we sufficiently communicated our knowledge of clays to the wider scientific community and to the general public?

These and other questions were carefully examined and widely debated during the 14th International Clay Conference (ICC) “*Micro et Nano - Scientiae Mare Magnum*”, which was held in Castellaneta Marina (Taranto province), Italy from June 14 to 20, 2009. This conference offered the scientific community an opportunity to review and update the incredible progress made in clay science during last few years and to identify the many goals to be set forth for the future of clay research.

The 14th ICC was organized by the Associazione Italiana per lo Studio delle Argille (AISA), on behalf of the “Association Internationale pour l’Étude des Argiles – AIPEA” [1, 2]. Saverio Fiore, the Conference Chair, and the dynamic local organizing committee (Angelo Aromando, Jessica Bellanova, Claudia Belviso, Francesco Cavalcante, Fortunato De Santis, Felice Finizio, Gina Giannossi, Rocco Laviano, Antonio Lettino, Luca Medici, Donato Perniola, Piero Ragone, Maria Cristi Sansone, Vito Summa, Fabio Tateo) hosted one of the largest clay conferences ever, with 1028 submitted abstracts. Over 600 clay scientists from 49 countries were present, with six plenary lectures, 42 keynote lectures, 24 invited presentations, and 408 oral and 548 poster contributions; the breadth of the conference showed the vitality of the international clay-science community.

The contributions were organized into eight main themes: Bio-Clays interface and life’s origin, Ceramics and engineering, Geology and geochemistry, Health and environment, Mineralogy and crystallography, Nano and porous materials, Soils and sediments, and Miscellanea. The themes were further subdivided to produce a total of 43 sessions. The sessions covered topics such as: Clays & biomolecules: from the origin of life to medical applications, Colloids & rheology, Clay minerals & climate change, Stability of clay minerals in geological radioactive waste disposal, Interaction of CO₂ with clay minerals, Clay minerals in extraterrestrial environments, Simulation of clay mineral structures and interfaces, Polymer-clay nanocomposites, and Industrial application of nanoclays. Of course, this list is not exhaustive of all the topics covered during the conference. However, the list represents a general overview of the subjects and gives a flavour of the great variability and intriguing aspects involved in clay science and its applications.

Philosophical Magazine publishes contributed articles in the field of condensed matter describing original results, theories and concepts relating to the structure and properties of crystalline materials, ceramics, polymers, glasses, amorphous films, composites, and soft matter. Coverage of phase transitions, nanotechnology, and novel materials is envisaged and further development is expected on, for example, soft condensed matter and, in particular, the interface between hard and soft matter.

This Special Issue collects some selected works of “Clay Science” with the purpose to show the wide range of applications and/or new fields, or recent relevant achievements in traditional, well-

established subjects, or prospects of future developments, all related to material sciences. These works were submitted to the following sessions: Bio-Clays interface and life's origin, Mineralogy and crystallography, Ceramics and engineering, and Nano and porous materials. In more detail, this issue includes the following contributions: Sources and Sinks of Clay Minerals on Mars which was presented by R. Milliken and D. Bish [3]; Biomass and Habitability Potential of Clay Minerals- and Iron-rich Environments: Testing Novel Analogs for the Mars Science Laboratory Landing Sites Candidates, by R. Bonaccorsi and co-workers [4]; The Role of Clays in the Prebiotic Synthesis of Sugar Derivatives from Formamide, by R. Saladino and co-workers [5]; Supercritical Fluid Behavior at Nanoscale Interfaces: Implications for CO₂ Sequestration in Geologic Formations, by D. R. Cole and co-workers [6]; Mobility of Adsorbed Cry1Aa Insecticidal Toxin from *Bacillus thuringiensis* (Bt) on Montmorillonite Measured by Fluorescence Recovery After Photobleaching (FRAP), by H. Quiquampoix and co-workers [7]; Mg- and K-exchange Cation Effects on the XRD Analysis of Soil Clays, by P. Aparicio and co-workers [8]; Effect of Chemical Composition and Swelling on Acid Dissolution of 2:1 Clay Minerals, by P. Komadel and co-workers [9]; Dielectric Properties of Micaceous Clays Determined by Terahertz Time-domain Spectroscopy, by M. Janek and co-workers [10]; Structure and Cleavage Energy of Surfactant-Modified Clay Minerals: Influence of CEC, Head Group, and Chain Length, by H. Heinz and Y. T. Fu [11]; Phase Transitions in Natural Zeolites and the Importance of P(H₂O), by D. Bish and H. W. Wang [12]; An Ab initio Molecular Dynamics Study of Hydronium Complexation in Na-Montmorillonite, by S. Churakov and G. Kosakowsky [13]; Effects of Hydrogen Bonding on the Properties of Layered Double Hydroxides Intercalated with Organic Acids: Molecular Dynamics Computer Simulations, by A. Kalinichev and co-workers [14]; Clay Exfoliation in Polymer Nanocomposites: Specific Chemical Reactions and Exchange of Specialty Modifications on Clay Surface, by V. Mittal [15]; Phase Transition of Conducting Polymer/Clay Nanocomposite Suspensions under Electric Field, by H. J. Choi and co-workers [16]; Fabrication of Composites Consisting of Clay Minerals and Dyes for Nonlinear Optical Materials, by J. Kawamata and co-workers [17]; Ultrathin Films of Clay-Protein Composites, by R. Schooneveldt and co-workers [18]; and On the High-Temperature Structural Behaviour of Talc, Mg₃Si₄O₁₀(OH)₂ up to 1600° C. Effect of Mechanical Deformation and Strain, by F. Dellisanti and G. Valdrè [19].

I thank all the contributors for their enthusiastic participation and support for this issue. I also express the deepest thanks to the cast of 50 referees for their invaluable help during the reviewing process.

Special thanks are due to the Chair of the 14th International Clay Conference, Saverio Fiore and to the Editorial Board of Philosophical Magazine for giving me the opportunity to organize this special issue "Layer silicate materials and clays" of Philosophical Magazine.

Finally, I gratefully acknowledge financial support from The University of Bologna "Alma Mater Studiorum", Italy.
