HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Author's Accepted Manuscript

Erratum to “Comparative study of crystal field effects for Ni^{2+} ion in LiGa_5O_8 , MgF_2 and AgCl crystals” [J. Phys. Chem. Solid, In Press, Corrected Proof; doi:10.1016/j.jpcs.2008.01.004]

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting galley proof before it is published in its final citable form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Received 17 Mai 2007; received in revisited form 2 July 2007; accepted 1 January 2008

The values for Racah parameters B and C, in last row of Table 3:

should not be 8,8313,225 but 881; 3225 for LiGa_5O_8 column,
should not be 9,954,192 but 995; 4192 for MgF_2 column,
should not be 8,073,141 but 807; 3141 for AgCl column.

I am very sorry for these mistakes.

Thank you very much ,

Yours Sincerely,

N.Avram,
