HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
In this study, we have shown that using O₂-plasma instead of water during the oxidation steps of the Al₂O₃ ALD deposition drastically improves our device performances (threshold voltage and gate leakage current). Furthermore, these good results can be easily achieved without any specific surface preparation or post-deposition treatments.
