We report the draft genome sequence of the type strain *Lactobacillus pasteurii* CRBIP 24.76, which is closely related to *L. gigeriorum* CRBIP 24.85\(^T\), isolated from a chicken crop. The total length of the 29 contigs is about 1.9 Mb, with a G+C content of 40% and 1,946 coding sequences.

Nucleotide sequence accession numbers. The strain is publicly available in two European Biological Resource Centres under the no. CRBIP 24.76\(^T\) and DSM 23907\(^T\). The draft of the whole-genome sequencing project has been deposited in EMBL under the accession no. CAKD01000001 to CAKD01000030. The version described in this paper is the first version.

ACKNOWLEDGMENTS

We thank N. Joly (Projects and Developments in Bioinformatics, Institut Pasteur, Paris) for the programs used for the quality filtering of the reads.

This communication is an initiative of the European Consortium of Microbial Resources Centres (EMbaRC), supported by the European Commission’s Seventh Framework Programme (FP7, 2007–2013), Research Infrastructures action, under the grant agreement no. FP7-228310.
