HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

The effects of video viewing on preservice teachers’ classroom activity: normative versus developmentalist approaches

Literature review

Instructional approaches

“Normative” approach (NA)
- What to do in the classroom
- Direct guidance initially
- How to interpret and reflect on classroom practices
- Indirect guidance and social learning

“Developmentalist” approach (DA)
- What to do in the classroom
- Direct guidance initially
- How to interpret and reflect on classroom practices
- Indirect guidance and social learning

Research issues

1. Does video viewing improve preservice teachers’ classroom activity?
2. Do instructional approaches influence the effects of video viewing?

Method

Participants: preservice teachers (PTs) during their induction year

VIDEO-BASED WORKSHOPS

ITERATIVE COURSE

Guided activity

Research design

Principle of continuity

CLASSROOM PRACTICES

Data collection and analysis

- Self-confrontation interviews
- Highlighting of “situated” PTs’ professional knowledge (i.e. effectively used in situ)

Experimental frame

NA Versus DA

Iterative course

Guided activity

Open environment

Autonomous activity

Theoretical framework

NA : Ostensive teaching (1)
- 1. Ostensive teaching
  - Meanings of the rules* are taught so that PTs can make sense of their experience
  - Within the framework of collective action theory, this learning occurs during “ostensive teaching” (Wittgenstein, 1996), by which trainers teach the meaning of professional acts and actions that are presented as exemplary
  - *Rules have been agreed upon by consensus within the community and ought to be followed by members of the community

DA : Enaction (3)
- 2. Explanations
  - PTs need explanations of how the learned rules can be used
  - A period for “explanation” (Wittgenstein, 1996) and “critical debate” (Williams, 1995) is important. The trainers teach ostensively by providing multiple examples of the rules

- 3. Help In Following the Rules
  - PTs need help in following the rules so that they have a broader understanding and range of activity in the classroom
  - When PTs decide to follow the rules learned in professional development settings, they extend the meaningful connections and the usefulness of the rules, as well as expanding their own understanding of the rules (e.g. the PT will adapt the follow-up of the rule according to their pupils; the delivery of the instruction being shorter and simplified with underlining pupils)

PVing videos of unknown teacher activity

Spaces for encouraged actions

In that kind of enactive technological approach, educational situation design consists in creating a “space for encouraged actions” (Durand & Poizat, in press) resulting from the arrangement of the environment in such a way that: (i) the trainees’ usual or habitual activity is no longer fully adequate, (ii) they therefore perceive that shifts or reorientations are needed, and (iii) the long-lasting transformations likely to be found in the environment can be initiated

DIRECT EVIDENCE

Indirect evidence
- Written commentaries
- Transcript of classroom discussions
- Questionnaires

Self-confrontation interviews

PERTURBATION

Viewing videos of unknown teachers typical activity

TRANSFORMATION

INQUIRY

PTs used the NeoPass@cdn platform (4) alone, without any human mediation, i.e. tutoring or instructions. They used autonomously a video-based device dedicated to a typical professional situation: beginning the course and getting students to work, characterized by a video exemplification (classroom situations and interviews) of an ordered variation of dispositions to act in teaching (perceptions, concerns, meaning of one’s actions and values)

Results

With both normative and developmental approaches, we highlighted that video viewing improve PTs’ classroom activity:
- Provided that PTs’ professional concerns “resonate” with what they are viewing:
  - NA:
    - PTs use in their classrooms what they learned ostensively through video viewing;
    - Nevertheless, they sometimes use non-taught elements resulting from an autonomous activity, oriented by their concerns and unexpected by the trainers
  - DA:
    - An immersive process allows the PTs to live a vicarious and fictional experience;
    - The fictional experience allows a resonance between own professional concerns and professional issue perceived in the observed classroom situation;
    - The resonance initiates an inquiry activity, oriented by and resulting in the elaboration of a new way to act
    - Provided that PTs adopt, adapt or invent a new way to act from what they viewed:
      - NA:
        - Guiding viewing (trainers) enables the PTs to elaborate a singular and functional way to use what has been taught through video viewing
      - DA:
        - The technological mediation of the video device (videos of classroom, comments, and complementary textual resources) enables the PTs to elaborate, alone, a new way to act;
        - Nevertheless, PTs sometimes have difficulties to elaborate alone a new way to act that can generate frustration and contribute to preclude professional development

Discussion

- Isolating the specific effects of the video among the other elements of the teacher education is methodologically complex;
- Research on video effects may not focus exclusively on PTs’ classroom activity but also on other dimensions of their work (preparation and planning of the course, meetings with other teachers and other school actors, etc.) and/or on the activity of their students;
- Training programs should institutionalize some times and spaces to encourage and help PTs investigate the job, and video can be an effective means to support this end
