HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
In order to deal with the important amount of results, a data management system has been created with a specific architecture to store.

For a detailed study, micro topography can be realized using two GPS (Differential GPS).

During the evaluation phase, all the archaeological data are recorded with a GPS.

A new schema of working has been created in order to implicate every single actor in the archaeological process.

The CSNE Project is involved in national searches and experiments on GIS in Inrap. All this work is still in progress.
