Submitted on 16 May 2017

HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
Open Archive TOULOUSE Archive Ouverte (OATAO)

OATAO is an open access repository that collects the work of Toulouse researchers and makes it freely available over the web where possible.

This is an author-deposited version published in: [http://oatao.univ-toulouse.fr/](http://oatao.univ-toulouse.fr/)
Eprints ID: 17006

The contribution was presented at ICDSST 2016:

Recently, the scientific research collaboration has been extended to social network analysis area, which concerns in evaluating the collaborative interaction among papers authors within publication databases. The Collab-Net platform aims to investigate these publication relationship in an automatic way by a Web-based platform. The present system was developed using free platforms for software development and database system purposes. The main goal of the Collab-Net is to allow researchers to analyze their own collaborative network, as well as possibilities for future collaboration among EWG-DSS members only using a Web-based platform, in anywhere at anytime. The Collab-Net system can be used as two end-users profiles: Administrator and Member profiles.

**Collab-Net functionalities and technical description:**

- A login page is available
- Two users' roles are possible
  - Administrator can add new members, edit members profile and remove members, add areas, edit areas, and remove areas.
  - Member can edit his own profile, find researchers by keywords or areas, run members research in the google scholar, and export the results in Excel format.
- Developed with base on free platforms of software development and database system:
  - Eclipse Integrated Development Environment (IDE) was used to develop the Web application
  - Java development language together with Java Servlet Page (JSP)
  - Database management system MySQL was applied to for storing and retrieving data using Structured Query Language (SQL)

**Google Scholar Database**

Collab-Net Database

Collab-Net Web Platform Version 2.0

**CONCLUSIONS & REMARKS:**

- The Collab-Net support members in the research of their collaboration network by key areas within the EURO Working Group on Decision Support System;
- This Web-based platform is available for all members registered in the group;
- Enables information access regards the author's published papers, such as: title, journal, year, cite number, and coauthors.
- Information recovered may provide future analysis on the researches collaboration and identify cluster areas of the EURO group.

**Currently, the Collab-Net Web-based collect data from the google scholar database.**
