THE STANDARDIZATION SURVIVAL KIT (SSK)
For a wider use of standards within Arts and Humanities

DH Benelux Conference 2017, 3rd-5th July 2017, Utrecht University

WHY standards?
Standards are usually published by standardization organizations. They are:

- the expression of a consensus
- accessible to anyone
- actively maintained

WHAT is the SSK?
The Standardization Survival Kit (SSK) is an overlay platform dedicated to promoting a wider use of standards within Arts and Humanities. It is conceived as a comprehensive online environment aiming at:

- documenting existing standards by providing reference materials,
- fostering the adoption of standards,
- and communicating to research communities.

HOW does it work?
The SSK takes a user-centered approach. It will guide scholars through all available resources, on the basis of reference research scenarios identified at the start of the project. The design intends to provide a single entry point for both novice and advanced scholars in digital methods.
