1. Context & Framework

Bayesian Model

Outcome of productions in auditory space

1st approach: Hard constraint

2nd approach: Soft constraint

3. Weighting of sensory pathways

4. Implementation: Adaptation to an auditory perturbation

5. Results

The research leading to these results has received funding from the European Research Council under the European Community's Seventh Framework Programme (FP7/2007-2013 Grant Agreement no. 339152, “Speech Unit(e)s”, PI: Jean-Luc Schwartze).
