HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
Modeling, Simulation and Training Procedural Skills: user experience and acceptability of a virtual reality simulator for scrub nurses in neurosurgery

Materials & Methods

- Scenario based on annotated video observations recorded in the OR
- 150 surgical instruments and 50 different interactions
- Acceptability assessed with the Unified Theory of Acceptance and Use of Technology (UTAUT) questionnaire
- User experience assessed with NASA TLX² (workload), SUS questionnaire (presence) and SSQ³ (simulator sickness)
- Qualitative data from post test interviews and logs

Discussion and Conclusion

- Acceptability the VR simulator was demonstrated for all participants
- No statistical significant differences regarding age, gender and expertise
- Most participants stressed its pedagogical interest, fun and realism
- VR simulator was validated for initial and vocational training

Limits

- Small sample size
- Experts from only one specialty and department

Following steps

- Measure transfer of skills to the OR
- Development of Non-Technical Skills (NTS) scenarios
- Intercultural studies
