Received: May 5th, 2010; Accepted: August 9th, 2010

Five French ferns belonging to different families were investigated for volatile organic compounds (VOC) by GC-MS using organic solvent extraction. Fifty-five VOC biosynthesized from the shikimic, lipidic and terpenic pathways including monoterpenes, sesquiterpenes and carotenoid-type compounds were identified. The main volatile compound of Adiantum capillus-veneris L. (Pteridaceae) was (E)-2-decenal with a plastic or “stink bug” odor. The volatile profiles of Athyrium filix-femina (L.) Roth (Woodsiaceae) and Blechnum spicant (L.) Roth (Blechnaceae) showed similarities, with small amounts of isoprenoids and the same main volatile compounds, i.e., 2-phenylethanal (odor of lilac and hyacinth) and 1-octen-3-ol (mushroom-like odor). The main volatile compound of Dryopteris filix-mas (L.) Schott (Dryopteridaceae) was (E)-nerolidol with a woody or fresh bark note. Polyketides, as acylfilicinic acids, were mainly identified in this fern. Oreopteris limbosperma (Bellardi ex. All.) J. Holub (Thelypteridaceae), well-known for its lemon smell, contained the highest biodiversity of VOC. Eighty percent of the volatiles was issued from the terpenic pathway. The main volatiles were (E)-nerolidol, α-terpineol, β-caryophyllene and other minor monoterpenes (for example, linalool, pinenes, limonene, and γ-terpinen-7-al). It was also the fern with the highest number of carotenoid-type derivatives, which were identified in large amounts. Our results were of great interest underlying new industrial valorisation for ferns based on their broad spectrum of volatiles.

Keywords: ferns, Pteridophytes, volatile organic compounds (VOC), filicinic acid, 2-phenylethanal, (E)-nerolidol, (E)-2-decenal, 1-octen-3-ol.

Pteridophytes, including ferns and fern allies, prevailing since the Carboniferous era, are still distributed worldwide [1a,1b]. Some are used as food and others in traditional medicine for their anthelmintic, schistosomicidal, antiviral, diuretic, antihemorrhagic, cholagogue, anti-rheumatism, anti-inflammatory, and remineralizing properties, and for the treatment of Meniere’s syndrome [2a-2e]. Ferns have been widely investigated for their non-volatile organic components, i.e., phenolics, amino acids, di- or sesqui-terpene glycosides, and alkaloids [3a-3g]. However, fewer studies have focused on the volatile organic compound (VOC) profile [2c,4a-4f]. The objective of this project was to identify and compare the VOC contents of ferns from France [5] that have never been studied with this end. As a result, Adiantum capillus-veneris L. (Pteridaceae), Athyrium filix-femina (L.) Roth (Woodsiaceae), Blechnum spicant (L.) Roth (Blechnaceae), Dryopteris filix-mas (L.) Schott (Dryopteridaceae) and Oreopteris limbosperma (Bellardi ex. All.) J. Holub (Thelypteridaceae) were chosen to determine their volatile chemical profiles.

Fresh plant material was utilized. Fifty-five components biosynthesized from the shikimic, lipidic and terpenic pathways were identified from the concentrated diethyl ether extracts of the five ferns (Table 1). Seventeen constituents of A. capillus-veneris extract were identified, including mainly polyketide derivatives (87.9% of the volatile fraction), along with small amounts of aromatics (9.4%), and only one monoterpene (myrcene: 2.5%).

\textsuperscript{f} Fresh Weight of fern and volume of diethyl ether used for the extraction (g/mL).
The main volatiles were (E)-2-decenal (32.1%), lauric amide (12.4%) and (E)-2-heptenal (7.4%). (E)-2-decenal, a natural plant and mushroom VOC with a plastic [6a] or oxidized mutton fat [6b] odor is also responsible for the unpleasant scent of “stink bug”. (E)-2-decenal is the major compound produced by these insects, with (2E,4Z)-decadienal and (2E,4E)-decadienal [6c,6d] also detected in A. capillus-veneris.

Nineteen compounds were identified for A. filix-femina with essentially polyketides (61.5%) and aromatics (29.9%), as well as small amounts of carotenoids (3.8%) and monoterpenes (2.7%) (Table 1). The main volatiles were 2-phenylethanal (24.8%) and 1-octen-3-ol (24.8%). This C8-derivative, also dominant in B. spicant, is well-known to be responsible for the mushroom aroma and usually found in large amounts in various fungi [7a-7g] and plants [7h].

Thirteen and eight compounds were identified from the sterile and fertile fronds of B. spicant, respectively (Table 1). Both volatile profiles showed 95% of polyketides and aromatics in quasi equal proportions and very small or negligible amounts of monoterpenes, sesquiterpenes and carotenoids (2-3%). The main volatiles were also 2-phenylethanal (about 45%), with an odor of lilac and hyacinth [7b], and 1-octen-3-ol (43.1 and 37.5%, respectively). Low amounts of benzaldehyde [7a,7f,7g] were detected, mainly in the fertile fronds (4.4%), with only 1.5% in the sterile ones.

Fifteen compounds were identified for D. filix-mas, mostly sesquiterpenoids (almost 60%), and polyketides (30.8%); the other groups of volatiles were minor (Table 1). The major volatiles were (E)-nerolidol (38.7%) with a floral, woody or fresh bark odor [7a,7c], acylifilicinic acids (16.6%) and 1-octen-3-ol (9.1%). Filicinic acid derivatives, well-known in Dryopteris and related genera of Dryopteridaceae, possess various biological activities (antioxidant, antibacterial, antitumor promoting activities), which may lead to therapeutic applications [2d,3b].

The volatile components of O. limbosperma, well-known for its lemon smell, were distributed in the five types of VOC (Table 1). The volatile profile of this odorous fern showed logically the highest biodiversity: thirty-one compounds were identified by GC-MS. Eighty percent of the volatiles were issued from the terpenic pathway (monoterpenes 40.3%; sesquiterpenes 19.7%; carotenoids 18.1%), and ten percent from the shikimic or lipidic pathways. The main volatiles were (E)-nerolidol (14.7%) and α-terpineol (13.5%), with a lemon odor, β-caryophyllene (5%), with a spicy odor, and other monoterpenes (for example, linalool, pinenes, limonene, and γ-terpinen-7-al), which contribute to the fern’s pleasant fragrance [7a]. It was also this fern that had the highest amount of carotenoid-type derivatives (18.1%).

More and more industries are searching for novel resources for natural compounds. This paper demonstrates that ferns can generate a broad spectrum of volatile organic components (VOC). Obviously, these kinds of natural volatiles are promising for various industrial formulations since they may be bioproduced, if required. Indeed ferns are attractive natural sources for research programs and for aroma applications in various industries.

Experimental

Plant material: Fresh aerial parts of ferns were collected from metropolitan France as follows: Adiantum capillus-veneris L. (Pteridaceae): 15/11/2009, grown in a pot. Athyrium filix-femina (L.) Roth (Woodsiaceae), Blechnum spicant (L.) Roth (Blechnaceae) and Dryopteris filix-mas (L.) Schott (Dryopteridaceae): 15/07/2009, Gimel-les-Cascades, Corrèze. Sterile fronds (SF) with narrow pinnae and fertile fronds (FF) of B. spicant with large pinnae were collected from the same plant at the same time. Oreopteris limbosperma (Bellardi ex. All.) J. Holub (Thelypteridaceae): 20/09/2009, Ambriugéat, Corrèze. The ferns were identified by Dr. Didier Froissard and voucher specimens are deposited at the Laboratory of Botany (Faculty of Pharmacy, Limoges, France).

Extraction: Aerial parts of ferns were cubed and extracted with diethyl ether (Carlo Erba, 6 ppm BHT; Table 1). After maceration for one week, the concentrated organic extracts were directly used for Gas Chromatography-Mass Spectrometry (GC-MS) analysis, as previously described [7g,7h].

GC-MS analyses: GC-MS analyses were carried out using a gas chromatograph-mass spectrometer Shimadzu QP2010plus (Kyoto, Japan) with a potential of 70 eV for ionization by electron impact. The temperature of the transfer line and the ion source were programmed to 250°C and 200°C, respectively. The spectrometer was used in scan mode, from 40 to 300 m/z ratio. Solvent extract analyses were performed using a 30 m x 0.25 mm x 0.25 μm SLB™-5MS (Supelco) fused silica capillary column. The injector temperature was 250°C. The column was temperature programmed as follows: 50°C (hold 2 min.), from 50 to 100°C at 3.3°C/min., from 100 to 140°C at 2.90°C/min., from 140 to 180°C at 2.70°C/min., and finally to 270°C at 10°C/min. The carrier gas was helium with a constant flow rate set close to 1.0 mL/min. VOC were identified by comparison with National Institute of...
Standards and Technology Mass Spectral Library [8a], and retention indices as reported in the literature [8b].

Acknowledgments - The authors thank Professor Alain Fruchier (ENSCM, Montpellier, France) for his suggestions and chemical advice.

Anupam Bishayee, Erzsébet Háznagy-Radnai, Thomas Mbimba, Péter Sipos, Paolo Morazzoni, Altaf S. Darvesh, Deepak Bhatia and Judit Hohmann

New Coumarin-Hemiterpene Ether Glucosides and a Structurally Related Phenylpropanoic Acid Derivative from Artemisia armeniaca
Mahdi Mojarrab, Abbas Delazar, Matthias Hamburger and Olivier Potterat

Synthesis of Fluorescent Analogues of the Anticancer Natural Products 4-Hydroxyphenylmethylene Hydantoin and δ-Tocotrienol
Mudit Mudit, Fathy A. Behery, Vikram B. Wali, Paul W. Sylvester and Khalid A. El Sayed

Two Pairs of Enantiomeric Neolignans from Lobelia chinensis
Jian-Xin Chen, Shen-Hui Huang, Lei Wang, Wei-Li Han, Ying Wang, Dong-Mei Zhang and Wen-Cai Ye

Evaluation and Discrimination of Cortex Magnoliae officinalis Produced in Zhejiang Province (Wen-Hou-Po) by UPLC-DAD-TOF-MS Fingerprint
Lin Wang, Ke Yuan, Wei-Wu Yu and Jing Wang

Phenolic Compounds from Eucalyptus gomphocephala with Potential Cytotoxic and Antioxidant Activities
Eman Al-Sayed, Olli Martiskainen, Małgorzata Bobrowska-Hägerstrand, Jari Sinkkonen, Kid Törnquist, Kalevi Pihlaja, Nahla Ayoub and Abdel-Nasser Singab

Nutritional Value of the Chilean Seaweeds Cryptonemia obovata and Rhodymenia corallina
Jaime Ortiz, Juan Vivanco, Paula Jiménez, Moisés Leiva, Leslie Ramirez and Andrés Bustamante

Volatile Components of Centaurea bracteata and C. pannonica subsp. pannonica growing wild in Croatia
Carmen Formisano, Felice Senatori, Svetlana Bancheva, Maurizio Bruno, Antonella Maggio and Sergio Rosselli

Biodiversity of Volatile Organic Compounds from Five French Ferns
Françoise Fons, Didier Froissard, Jean-Marie Bessière, Bruno Buatois and Sylvie Rapior

Composition and Chemical Variability of Leaf Oil of Myrtus communis from North-Eastern Algeria
Amel Bouzabata, Faffani Boussaha, Joseph Casanova and Félix Tomi

Chemical Composition and Antimicrobial Activity of Essential Oils from Centaurea pannonica and C. jacea
Tanja Milošević, Catherine Argyropoulou, Slavica Solujić, Dragana Murat-Spahić and Helen Skaltsa

GC/MS Analysis and Antimicrobial Activity of the Essential Oil of Fresh Leaves of Eucalyptus globulus, and Leaves and Stems of Smymium olusatrum from Constantine (Algeria)
Habiba Daroui-Mokaddem, Ahmed Kabouche, Mabrouka Bouacha, Boudjemaa Soumati, Aida El-Azzouny, Christian Brunau and Zahia Kabouche

Chemical Composition and Antifungal Activity of Essential Oils of Thuja sutchuenensis, a Critically Endangered Species Endemic to China
Huaping Lei, Yonggang Wang, Chang Su, Fengyin Liang, Weiwei Su, Mamie Hui, Pangchui Shaw and Yulong Luo

Composition and Antifungal Activities of the Leaf Essential oil of Litsea coreana from Taiwan
Chen-Lung Ho, Kuang-Ping Hsu, Yen-Hsueh Tseng, Pei-Chun Liao, Eugene I-Chen Wang, Narumon Jeyashoke, Tzu-Chao Chien, Wei-Chih Dong and Yu-Chang Su

Essential Oil Polymorphism of Wild Growing Hungarian Thyme (Thymus pannonicus) Populations in the Carpathian Basin
Zsuzsanna Pluhár, Szilvia Sárosi, Adrienn Pintér and Hella Simkó

Review/Account
Naturally Occurring Diarylheptanoids
Haining Lv and Gaimei She
Original Paper

Antibacterial and Antifungal Screening of *Centaurium pulchellum* Crude Extracts and Main Secoiridoid Compounds
Branislav Šiler, Danijela Mišić, Jasmina Nestorović, Tijana Banjanac, Jasmina Glamočlija, Marina Soković and Ana Ćirić

A New Sesquiterpene and other Constituents from *Saussurea lappa* Root
Jin-ao Duan, Pengfei Hou, Yuping Tang, Pei Liu, Shulan Su and Hanqing Liu

Terpenoids from *Turraeanthus* species
Juliette Catherine Vardamides, Valerie Tedjon Sielinou, Sergi Herve Akone, Augustin Ephrem Nkengfack and Berhanu M. Abegaz

Bioactive Clerodane Diterpenes from Roots of *Carex distachy*a
Antonio Fiorentino, Brigida D’Abrosea, Severina Pacifico, Angelina Izzo, Grazia D’Angelo and Pietro Monaco

An Unusual Bisnor-clerodane Diterpenoid from *Polyalthia simiarum*
Selina Kabir, Mohamad S. Rahman, A. M. Sarwaruddin Chowdhury, Choudhury M. Hasan and Mohammad A. Rashid

Anti-inflammatory Mechanisms of Compounds from *Curcuma mangga* Rhizomes using RAW264.7 Macrophage Cells
Kanitda Kaewkroek, Chatcatchai Wattanapiromsakul and Supinya Tewtrakul

Analysis of MS/MS Fragmentation of Taxoids
Kouhei Morikawa, Ken Tanaka, Feng Li, Suresh Awale, Yasuhiro Tezuka, Takahiro Nobukawa and Shigetoshi Kadota

New Triterpene Glycosides from *Camptosorus sibiricus*
Ning Li, Wan Xiao, Bailing Hou and Xian Li

New Hopane Triterpenes and Antioxidant Constituents from *Potentilla fulgens*
Vikas Jaitak, Vijay K. Kaul, Himlata, Neeraj Kumar, Bikram Singh, Jyoti Dhar and Om P. Sharma

Cytotoxic Evaluation of Semisynthetic Ester and Amide Derivatives of Oleanolic Acid
Shikha Gupta, Komal Kalani, Mohit Saxena, Santosh K. Srivastava, Satyam K. Agrawal, Nitasha Suri and Ajit K. Saxena

Two Ring-A-Aromatized Bile Acids from the Marine Sponge *Sollasella moretonensis*
Zhenyu Lu, Ryan M. Van Wagoner, Mary Kay Harper, John N. A. Hooper and Chris M. Ireland

Asporyergosterol, A New Steroid from an Algicolous Isolate of *Aspergillus oryzae*
Ming-Feng Qiao, Nai-Yun Ji, Xiang-Hong Liu, Fang Li and Qin-Zhao Xue

Two Minor Phytoecdysteroids of the Plant *Silene viridiflora*
Nilufar Zokirzhonovna Mamadalieva, Abdulaziz Adilhanovich Janibekov, Jean-Pierre Girault and René Lafont

7-O-Methylvariecolortide A, a New Spirocyclic Diketopiperazine Alkaloid from a Marine Mangrove Derived Endophytic Fungus, *Eurotium rubrum*
Dong-Li Li, Xiao-Ming Li, Peter Proksch and Bin-Gui Wang

Cytotoxic Thiocarbamate Derivatives of Boldine
Franz A. Thomet, Pablo Pinyol, Joan Villena, Luis J. Espinoza and Patricio G. Reveco

Synthesis and Bioactivity of β-Carboline Derivatives
Shengkun Li, Bing Yang, Qianliang Zhang, Jiwen Zhang, Junru Wang and Wenjun Wu

Two Acylated Flavonoid Glycosides from the Leaves of *Quercus dentata*
Ling-Li Wang, Mei-Xiang Jiang, Sui-Xu Xu, Qi-Shi Sun, Guang-Yao Zeng and Ying-Jun Zhou
