HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Effect of basic psychological needs satisfaction on attentional states of pupils in Physical Education

INTRODUCTION

- Previous studies have underlined the increasing difficulty in maintaining adequate concentration levels among children and adolescents.
- Basic Psychological Needs (BPN) could indirectly predict pupils' concentration in PE.
- The purpose of this study was to analyse the relationship between the Basic Psychological Needs (BPN) satisfaction and the pupils' attentional states in PE context .

METHODS

Participants and procedure:

- 426 high school pupils ($M_{age} = 15.36$ years; $SD_{age} = .82$ years) from 21 class.
- After a PE exercise including instructions, each pupil filled questionnaires.

Measures:

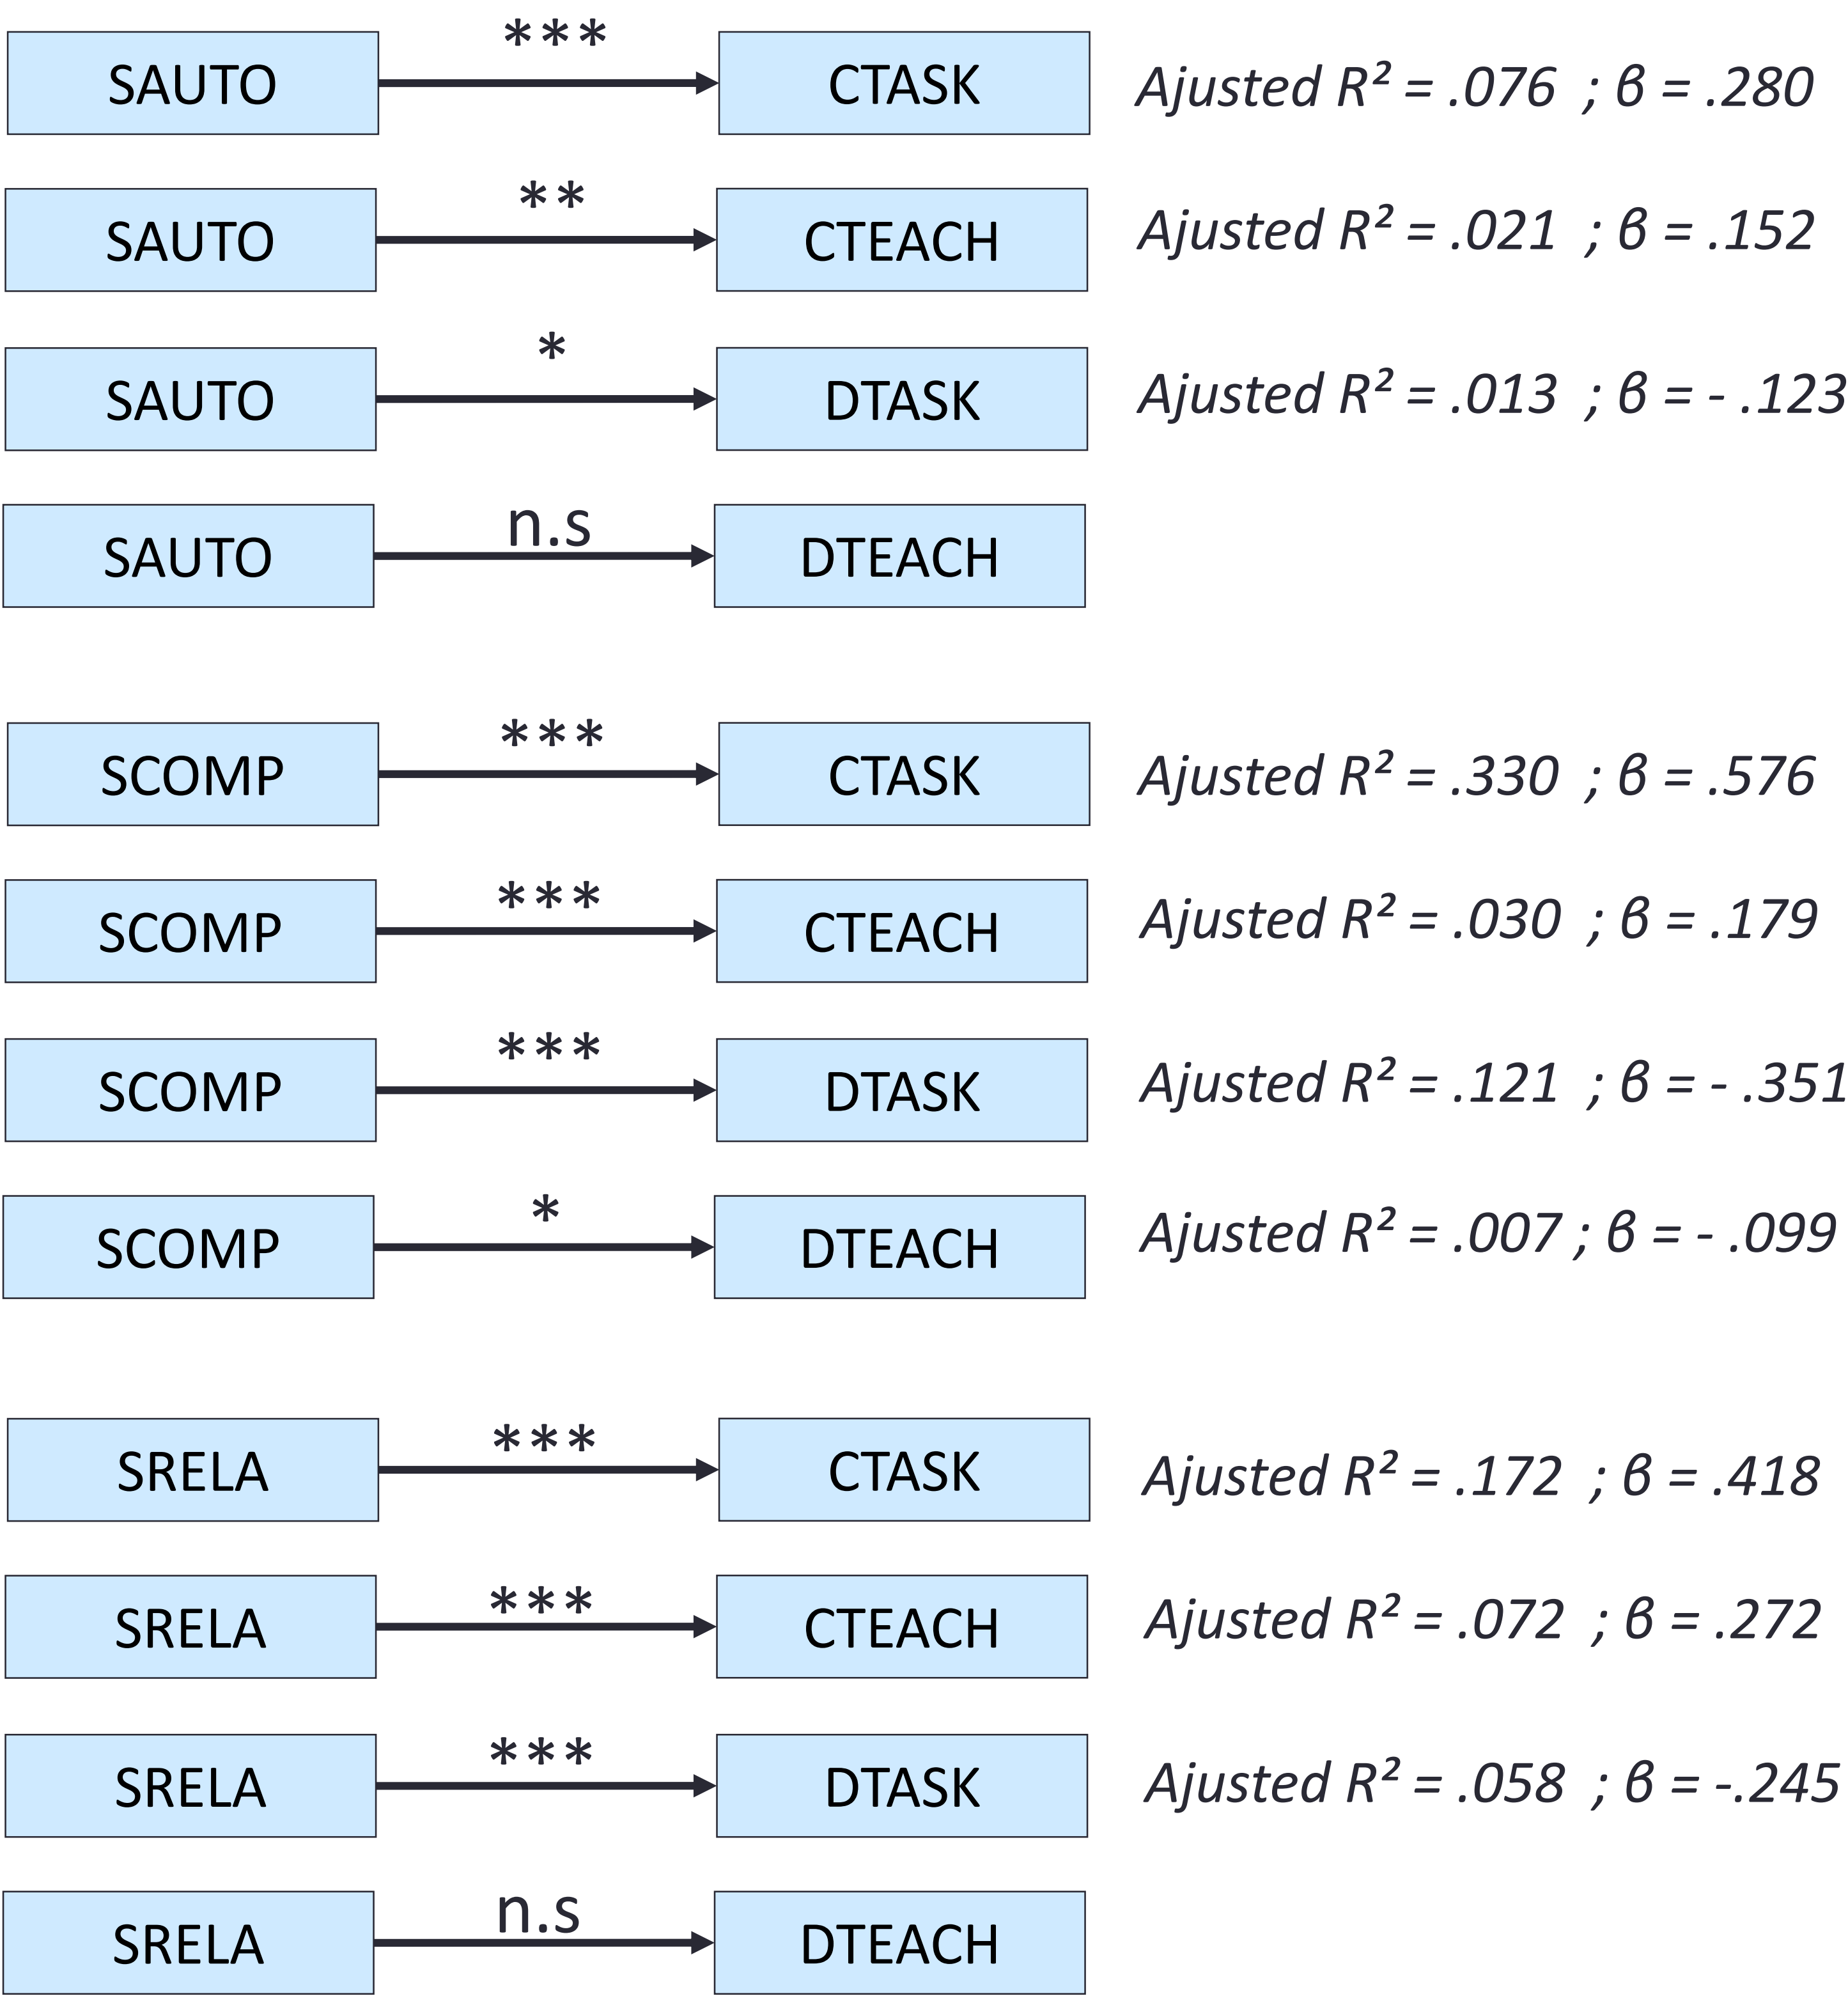

- BPN satisfaction was assessed using three scales (Gillet et al., 2008) measuring the satisfaction of autonomy need (SAUTO), competence need (SCOMP), and relatedness need (SRELA).
- Attentional states were measured with the Exercise Attentional Questionnaire (validation in process), including four dimensions: "concentration on the task" (CTASK), "distraction on the task" (DTASK), "concentration through teacher support" (CTEACH), and "distraction through teacher support" (DTEACH).

Statistical Analysis (SPSS 22 & Amos):

- Linear regressions and Structural Equation Modeling (SEM) were realised in order to understand the relationships.
- Intra-Class Correlations (ICC) were calculated to analyse the influence of the factor class.
- Multi-level regressions were realised to understand relationships controlling class effect

RESULTS

Linear regressions

Structural Equation Modeling

p	χ ²	df	GFI	AGFI	RMR	SRMR	RMSEA	LO90	HI90	NFI	TLI	CFI	χ ² /df	AIC
.027	20	10	.987	.963	.058	.028	.049	.016	.080	.975	.973	.987	2	56

Linear mixed model

	VI			
	SAUTO (27%)	SCOMP (4%)	SRELA (12%)	SAUTO*SCOMP*SRELA
CTASK (9%)	*** 1342 _a .037 _b .027 _c	*** 1205 _a .483 _b .033 _c	*** 1295 _a .352 _b .037 _c	*** 1275 .008 _b .001 _c
CTEACH (10%)	** 1491 _a .143 _b .045 _c	*** 1487 _a .173 _b .046 _c	*** 1468 _a .265 _b .045 _c	*** 1474 .005 _b .001 _c
DTASK (7%)	* 1585 _a -.129 _b .050 _c	*** 1535 _a -.379 _b .049 _c	*** 1565 _a -.265 _b .051 _c	*** 1564 -.005 _b .001 _c
DTEACH (2%)	n.s	* 1404 -.086 _b .042 _c	n.s	n.s

Note: a = - 2 Log ; b = Estimate ; c = Standard Error ; ns = p > .05 ; * = p < .05 ; ** = p < .01 ; *** p < .001

SUMMARY AND CONCLUSIONS

- BPN satisfaction is related to attention during a PE exercise.
- The competence need satisfaction seemed the most related to pupils' attentional states.
- PE teachers should support BPN through a positive motivational climate, and especially the competence need.
- Futures analyses will be performed using Multilevel Structural Equation Modelling (MSEM).
