HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

RAYLEIGH-BRILLOUIN SCATTERING IN COMPRESSED H₂, D₂ AND HD

A. D. MAY

Department of Physics, University of Toronto, Toronto, Canada

and E. H. HARA

Communications Research Centre, Ottawa, Canada

Résumé. — On présente le spectre Rayleigh-Brillouin de la lumière diffusée par H₂, D₂ et HD comprimés pour des densités allant de 1 à 100 amagats. On compare les spectres observés à différents spectres théoriques [1]. En particulier on compare [2] le spectre au spectre calculé à partir de la limite hydrodynamique de la théorie microscopique de Tong et Desai. Leur théorie est fondée sur le formalisme de la fonction mémoire : elle rend compte du couplage entre le flux de chaleur et le tenseur des contraintes dû à la viscosité qui a été oublié par d'autres chercheurs. On discute la signification de ce couplage qui influence la relaxation des états rotationnels.

Abstract. — The Rayleigh-Brillouin spectrum of light scattered from compressed H₂, D₂ and HD is presented for densities ranging from about 1 to 100 amagats. The observed spectra are compared with various theoretical spectra [1]. In particular the spectrum is compared [2] with the theoretical spectra calculated from the hydrodynamic limit of Tong and Desai's microscopic theory. Their theory is based on the Zwanzig-Mori memory function formalism and accounts for the coupling between heat flux and the viscosity stress tensor which has been overlooked by other workers. The significance of this coupling which influences the relaxation of the rotational states is discussed.
